System Recovery Inc. – Business Continuation & Disaster Recovery Services

Be Ready………Be Aware

As recent as March 2008 the NCUA is proposing new regulations (Part 748 and Appendices, Part 749 and Appendices) which specifically outline "Catastrophic Acts Preparedness Guidelines". Lastly, the NCUA has made changes to the NCUA Call report that includes the credit unions' hot site information as well as the location and date of their last test.

You are aware that your information and resources should be available to you 365/24/7, no matter what the circumstance or situation. But what about during events that are outside of your control? For example fire, floods, hurricanes and other natural events? Any one of these scenarios can bring your business to its knees in the blink of an eye. So how do you plan and prepare to recover your information, resources and services in the timeliest manner?

Description of Service Offering

DR Application Test

You've secured your organization's most critical assets by implementing a disaster recovery solution. Although you thoroughly tested and verified this solution during implementation, your environment will have changed over time and may have altered the state of your systems. These include changing server configurations, altered network setups, virus infections and hardware failures. Any gap in time since the last disaster recovery test conducted will amount to a growing gap in assurance that your disaster recovery system will work as planned. What's the only way to close this gap? To perform yearly disaster recovery tests.

This offering is geared toward testing business critical applications for functionality and reliability. We will assist our clients in testing and performing transactions for the purpose of simulating every day operations and to verify our client's data from their backup environment. Clients will have access to all of their resources at all times.

To ensure the integrity and effectiveness of your disaster recovery capability in the face of such constant changes, it's not just sensible, but critical to conduct regular disaster recovery tests. In fact, no disaster recovery solution is complete without frequent disaster recovery testing.

For more information or for an on-site presentation, please email us at info@systemrecoveryinc.com, or call us at 508-668-6688.

We provide piece of mind for your business
