System Recovery Inc. – Business Continuation & Disaster Recovery Services

Be Ready.....Be Aware

You are aware that your information and resources should be available to you 365/24/7, no matter what the circumstance or situation. But what about during events that are outside of your control? For example fire, floods, hurricanes and other natural events? Any one of these scenarios can bring your business to its knees in the blink of an eye. So how do you plan and prepare to recover your information, resources and services in the timeliest manner?

Description of Service Offering

Local Data Replication & Backup

You have secured your organization's most critical assets by implementing a disaster recovery solution. Although you thoroughly tested and verified this solution during implementation, your environment will have changed over time and may have altered the state of your systems. These include changing server configurations, altered network setups, virus infections and hardware failures. Any gap in time since the last disaster recovery test conducted will amount to a growing gap in assurance that your disaster recovery system will work as planned. The only way to close this gap is to perform regular disaster recovery tests.

This offering include(s):

- Quarterly verification tests of pre-determined business critical application data from the clients NAS or SAN devices to the SRI data center in Walpole, MA.;
- Testing local failover capabilities;
- Validating that the client has full access to all of their data from the data vaulting remote location;
- Quarterly reports will be generated to provide proof of availability and restorability.

For more information or for an on-site presentation, please email us at info@systemrecoveryinc.com, or call us at 508-668-6688.

We provide piece of mind for your business
